DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 27-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In considering claim 27, the claim states "an amount substantially greater". However, in claim 28 the range of "between about 10% and 500% greater" is given.

The examiner rejects claim 27 since "an amount substantially greater" would not be equated/equivalent to an amount which is 10% greater. Although, 10% would be a greater/larger number it is not "substantially greater".

Thus the examiner requests the applicant to cancel or amend (without introducing new matter) the claims.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under

Art Unit: 2614

the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 27 is rejected under 35 U.S.C. 102(e) as being anticipated by Wang et al., US 6,621,593.

a) the claimed distorting the light beam by an amount substantially greater than the distortion... is met by aspherical optical element which may be the output window 126, the last optical element in the raster output scanning (ROS) system, the wobble correction mirror 124 of the ROS system (Fig 1) which corrects (by distorting) the scan line distortion/bowing effect subsequent to the f-theta lens 122 (Fig 1), where the distortion is greater than the f-theta lens to correct for the bowing effect.

b) the claimed correcting scan line length variation introduced by said distorting... is met where the system which utilizes the aspherical optical element corrects the non-linearity of the scan line/bow effect (scan line length variation).

Allowable Subject Matter

3. Claims 1-26 appear allowable over the prior art of record.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure—see newly cited references on attached form PTO-892.
